

Medical Devices Engineer

Description Hôpital du Valais is the leading healthcare provider in the Canton Valais and its number one employer with over 5'000 employees. Annually it counts over 49'000 inpatient discharges and 449'000 outpatient consultations.

Hôpital du Valais is seeking for the Institut Central des Hôpitaux, in charge of the transverse activities for its hospital centers and external health providers, an experienced **Medical Devices Engineer** to join its IT Operations team

This is your opportunity to join a small engineering team tasked with building and maintaining a state of art IT infrastructure for medical devices (radiology, radio-oncology, laboratory, cardiology, etc). Together with your colleagues you support the core business applications of our hospital on a daily basis and enable our development & support teams to better serve our clients.

Are you excited to dive head on into new projects, do you have a passion for automation and industrialization, do you enjoy collaborating with your peers in a challenging environment? If so, join us!

Exigences **Votre mission :**

- Assuring, extending and evolving a wide range of medical devices to match the requirements of a state-of-the art hospital
- Identifying and implementing new sustainable solutions and products while searching for improvements of the existing medical devices
- Maintaining current documentation of infrastructure design, operation, and procedure manuals and ensuring internal security standards
- Working with the business and external partners on a broad range of projects from idea to realization while recognizing opportunities for technology innovation in support of strategic initiatives
- Maintaining state-of-the art know-how and shaping minds inside and outside of the IT department
- Helping to define medical devices policies and implementing industry best practices

Votre profil :

- Master in computer science, physics or a similar area with practical experience
- Energetic, innovative and self-motivated team player with a Can-Do attitude
- Deep understanding of DICOM, HL7 protocols
- Experience with PACS, RIS and laboratory systems
- Broad knowledge of a wide range of medical devices
- Minimum 3-5 years' experience in the medical technology field
- Knowledge of Atlassian Confluence, DevOps, Scrum/Agile, C++/C# and the LAMP stack is a plus
- Fluent in English. German and French is a plus

Entrée en fonction De suite ou à convenir
