

Network Engineer 100%

Description Hôpital du Valais is seeking for the Institut Central des Hôpitaux, in charge of the transverse activities for its hospital centers and external health providers, an experienced

Network Engineer 100%

to join its IT Operations team

This is your opportunity to join a small engineering team tasked with building and maintaining a state of art network spanning 2 datacenters, 18 remote sites, and supporting an active roaming workforce. Together with your colleagues you support OSI layers 1-7 on a daily basis and enable our development and support teams to better serve our clients. Are you excited to dive head on into new projects, do you have a passion for automation and industrialization, do you enjoy collaborating with your peers in a challenging environment? If so, join us!

Exigences **Votre mission :**

- Assuring a network infrastructure (including but not limited to routers, switches, firewalls, proxies, ...) which matches the requirements of a state-of-the art hospital
- Identifying and implementing new sustainable solutions and products while searching for improvements of the existing infrastructure
- Maintaining current documentation of network design, operation, and procedure manuals and ensuring internal network security standards
- Working with the business and external partners on a broad range of projects from idea to realization while recognizing opportunities for technology innovation in support of strategic initiatives
- Maintaining state-of-the art know-how and shaping minds inside and outside of the IT department
- Helping to define network policies and implementing industry best practices

Votre profil :

- Master in computer science, communication systems or a similar area with practical experience
- Energetic, innovative and self-motivated team player with a Can-Do attitude
- Deep understanding of L3 routing protocols--especially OSPF
- Hands-on with LAN/switching protocols: STP, LACP, LLDP, VRRP, vPC
- Broad experience administering IOS, NOS and Fabric OS,
- Proven track record managing Wireless, VPN and Reverse Proxy solutions
- Solid knowledge of network security basics, including firewalls, 802.1x and IDS/IPS
- Minimum 3-5 years' experience maintaining converged network infrastructure
- Knowledge of Atlassian Confluence, DevOps, Scrum/Agile, Puppet, Zabbix, ISE/FreeRadius, VoIP, QoS, VTPv3 is a plus
- Able to operate, monitor and maintain high available infrastructures
- Fluent in English. German or French is a plus
