

Lonza

Career Days - Ibex™ Solutions

Job Description Summary

Today, Lonza is a global leader in life sciences operating across three continents. While we work in science, there's no magic formula to how we do it. Our greatest scientific solution is talented people working together, devising ideas that help businesses to help people. In exchange, we let our people own their careers. Their ideas, big and small, genuinely improve the world. And that's the kind of work we want to be part of.

Ibex® Solutions (www.ibex.lonza.com) is a modular build complex to develop and manufacture biological products. It enables companies to get access to a complete solution, gaining speed and achieving a simplified value chain.

The Ibex® Complex is our contribution to the medicine of tomorrow and possibly the next step in your career?

In order to support our continuing growth in Visp we are currently organizing a two-day virtual career event at Lonza - the Career Days – including various presentations, interviews and group discussions. We are looking for people with an academic background who want to kick off their career in biopharma manufacturing and join our talent community in Visp.

Key requirements:

- Bachelor or Master in Biotechnology, Bio-chemical Engineering, Chemical Engineering or related Life Science disciplines
- Knowledge in either USP or DSP
- Excellent communication skills in English and/or German

During those two days, you will have the chance to get to know Lonza better and to find out about how we work and what we do.

Sounds interesting? Apply for our next Career Days in October!

Every day, Lonza's products and services have a positive impact on millions of people. For us, this is not only a great privilege, but also a great responsibility. How we achieve our business results is just as important as the achievements themselves. At Lonza, we respect and protect our people and our environment. Any success we achieve is no success at all if not achieved ethically.

People come to Lonza for the challenge and creativity of solving complex problems and developing new ideas in life sciences. In return, we offer the satisfaction that comes with improving lives all around the world. The satisfaction that comes with making a meaningful difference.
