

Chemist/Chemical Engineer (FH), PAT Professional-000006S9

Description We are looking for a flexible and highly motivated person to support our globally focussed PAT (Process Analytical Technology) laboratory, who brings in knowledge and interest in online analytics, process automation and the associated IT. Ideally, you already have some experience working one or more of these fields. You will be responsible for feasibility studies in the lab, as well as for implementation of PAT setups in production. Acquisition, analysis and documentation of results as well as maintenance and calibration of our PAT test equipment represent the main tasks. You will work closely with our PAT Experts, our project scientists and our people in production.

Qualifications Bachelor or equivalent degree in chemistry or chemical engineering. Previous experience is a plus, but not a requirement. An interest in hands-on experimental work in the lab and in the plant as well as an affinity towards IT is a must. You are an open minded and communicative person who is open for new technologies and ideas. You enjoy working independently, but are a team-oriented person, capable of handling multiple projects at the same time. Strong communication skills across different cultures and backgrounds as well as a good command of German and English round off your personal Profile.
