

Junior Scientist Biotechnology-000005UP

Description As a part of the fermentation team within RSI Process Development you're main responsibilities are in the practical execution of microbial fermentations and the primary recovery steps as well as handling of biocatalytical reactions. In agreement with the project leader you will be also responsible for the required administrative tasks such as time management, experimental planning, documentation and analysis of experimental results. The diversified accountabilities do also comprise the writing of SOP's, the responsibilities for high tech equipment and the supervision of apprentice.

Among other duties also scientific research such as evolution of new trends in the area of interest as well as literature researches on specific topics is part of your field of application.

Qualifications You have B.Sc. in Biotechnology (or equivalent qualification) and have already practical experience in the field of microbial fermentation and biocatalysis. You are well experienced in working with sterile techniques and microbial cultures.

Work in a laboratory environment allows you to be productive in the same way as brainstorming with coworkers and you are willing to tackle diversified challenges in the different projects. Besides german you are also able to communicate in English and using MS Office in daily work efficiently is one of your strength.
