

Praktikum in Purification / DSP-000004I2

Beschreibung Our Research department is focusing on the development and optimization of purification processes for microbial-produced biopharmaceuticals, especially for proteins. Our goal is the successful development of downstream processes while following regulatory, technical and production requirements and the subsequent technology transfer to manufacturing. We currently have a position for an internship and are looking for a motivated individual to support our activities.

Qualifikationen You are studying or recently completed your academic education in the field of biotechnology or biochemistry and you would like to gain experience in the biopharmaceutical industry. You have problem-solving skills and have a results oriented approach. You enjoy experimental work in the laboratory as well as office work. Excellent English and German language skills complete your profile.
