

Project Engineer / Technical Project Manager-000005IJ

Beschreibung We are looking for a flexible and highly motivated employee with responsibility in design and execution of capital projects in the (bio-) pharmaceutical industry. Engineering and project management in all phases of capital projects as well as responsibility for costs, schedule and functionality are your tasks. You define metrics to monitor and review performance for the project, make appropriate interventions and provide guidance to senior project management. You lead and provide the senior technical expertise for the project and make decisions that affect its success. You are highly engaged to drive and demonstrate synergies at organizational interfaces and promote excellence in delivery.

Qualifikationen Bachelor- or Master Degree in Process/Chemical Engineering with a minimum of 5 years of professional experience in pharma/biotech capital project planning and execution. In addition several years of experience in Technical Project Management in the field. The complexity of projects requires your ability to work efficiently in a multi-disciplined, cross-functional (matrix) environment. You enjoy working in interdisciplinary teams. Your flexibility allows you to be open for new technologies, ideas and creative solutions and readiness to travel. Strong communication/interpersonal skills and your ability to communicate effectively with colleagues and contractors as well as a good command of German and English round off your personal profile.
