

Formulation Development Scientist

1896 Vouvry

A multinational
pharmaceutical company is looking for

Formulation Development Scientist

Your responsibilities:

- Test new raw materials using preformulation principles to support the development of new products (injectable and topical solutions).
- Design and execute studies to develop formulations and process to support the development of new products and for the optimization of existing products.
- Conduct literature searches to remain aware of current and new science and technological developments within relevant fields to ensure continuously improvement.
- Assist in the development of methods (rheological analysis, API quantification,..) which characterise formulations or raw materials.
- Prepare protocols and reports and keep accurate records of all development projects.
- Manage multi-project tasks assigned day-to-day, from initial design of the development project to production scale up, and report progress on a regular basis.
- Prepare stability samples and stability protocols. Work effectively with R&D Analytical to monitor, evaluate, summarize and interpret results of stability studies.

Education and experiences:

- PhD in Pharmaceutical Sciences
- A previous experience in university or biotech/pharma industry
- Experience/ knowledge of drug delivery
- Fluent in English and French
- Strong attention to details and organizational skills
- Strong computer skills, including MS Word, Excel, PowerPoint
- Able to work productively in an interdisciplinary team environment

We invite you to join a professional team, promoting independence, initiative and personal development. Our production site in Vouvry, located in a privileged place, is certified GMP and ISO 13485. It meets with the highest standards of the profession and is a dynamic and a motivating work environment.

We kindly invite you to send us your complete application (CV, cover letter, copies of work certificate and diplomas).
